

Dr. Cora Taylor

Assistant professor and clinical psychologist at Geisinger Autism & Developmental Medicine

Dr. Taylor has expertise in the diagnostic evaluation of children with a range of developmental concerns. At Geisinger, Dr. Taylor conducts research and leads the phenotypic battery selection and administration on a variety of current research protocols at Geisinger, with a focus on the phenotypic characterization of individuals with rare genetic conditions. Dr. Taylor has experience in engaging families and family-based organizations for rare genetic conditions in research through online participation that is offered internationally to interested patients and families. Prior to joining Geisinger, Dr. Taylor completed her graduate training at the University of Tennessee, and a research and clinical postdoctoral fellowship at Vanderbilt University.
